Doi: https://doi.org/10.5281/zenodo.24488469

Abstract: The Taj Mahal in Agra, India, is often described as a monument to love, but it is also a complex work of architecture, politics, and cultural memory. This article examines how the monument expresses Mughal imperial ideas, why it has kept its global importance for nearly four centuries, and what threatens it today. The study uses a qualitative review of historical sources, scholarly books, and official heritage and legal documents. The results show three main points. First, the Taj Mahal was built as a tomb for Mumtaz Mahal but was also designed to express Shah Jahan's authority and a religious vision of paradise. Second, its design combines Persian, Islamic, and Indian traditions in a very balanced way. Third, modern pollution and mass tourism are now the biggest risks to its survival. The article concludes that the Taj Mahal's value as a symbol of love is real, but it is only one part of a wider heritage that needs careful protection.

Keywords: Taj Mahal, Mughal architecture, Shah Jahan, Mumtaz Mahal, World Heritage, conservation, tomb.

Аннотация: Тадж-Махал в Агре (Индия) часто называют памятником любви, однако это также сложное произведение, в котором переплетаются архитектура, политика и культурная память. В этой статье рассматривается, как памятник воплощает имперские идеи Великих Моголов, почему он сохраняет свое мировое значение на протяжении почти четырех столетий и что угрожает ему сегодня. В исследовании применяется качественный анализ исторических источников, научных книг, а также официальных документов, касающихся культурного наследия и правовых аспектов. Результаты позволяют выделить три основных момента. Во-первых, Тадж-Махал был построен как гробница для Мумтаз-Махал, но при этом был задуман так, чтобы выразить власть Шах-Джахана и его религиозное видение рая. Во-вторых, в его облике весьма гармонично сочетаются персидские, исламские и индийские традиции. В-третьих, в настоящее время наибольшую угрозу для его сохранности представляют современное загрязнение окружающей среды и массовый туризм. В статье делается вывод, что ценность Тадж-Махала как символа любви – реальна, однако это лишь часть более широкого наследия, которое нуждается в бережной охране.

Ключевые слова: Тадж-Махал, архитектура Великих Моголов, Шах-Джахан, Мумтаз-Махал, всемирное наследие, сохранение, гробница.

Introduction

Few buildings in the world are recognized as quickly as the Taj Mahal. Every year, millions of people travel to Agra to see its white marble dome beside the Yamuna River. Most visitors know the basic story: the Mughal emperor Shah Jahan lost his beloved wife, Mumtaz Mahal, and built a great tomb in her memory. This story is true in its main lines. Mumtaz Mahal died in 1631 in Burhanpur after giving birth to the couple's fourteenth child, and the emperor ordered the construction of her mausoleum soon afterwards.

However, the popular story is too simple. Historians point out that the Taj Mahal was not only a private expression of grief. It was also a public statement by one of the richest rulers of the seventeenth century (Asher, 1992). The complex includes a mosque, a guest house, a large garden, and a gateway, and these parts together form a carefully planned whole. In 1983, UNESCO added the site to the World Heritage List and described it as a masterpiece of human creative genius (UNESCO World Heritage Centre).

This article asks three questions:

1. How do the history and design of the Taj Mahal reflect Mughal ideas of power, religion, and love?
2. Why has the monument remained a global cultural symbol?
3. What are the main challenges to its preservation today?

The aim is to give a clear, evidence-based picture of the monument for readers who want to go beyond the romantic legend.

Methods

Research design

This study is a qualitative, document-based review. It did not involve fieldwork, interviews, or new measurements. Instead, it analyzes existing written sources and compares what they say about the history, design, meaning, and conservation of the Taj Mahal.

Sources

Three groups of sources were used.

1. **Historical records.** These include the official chronicle of Shah Jahan's reign, the *Shah Jahan Nama* of 'Inayat Khan (Begley & Desai, 1990), and the travel account of the French jeweller Jean-Baptiste Tavernier, who visited Agra during the construction period (Tavernier, 1925). Both were read in published English translations. A collection of translated seventeenth-century sources was also consulted (Begley & Desai, 1989).
2. **Scholarly studies.** These include books and articles on Mughal architecture, garden design, and the symbolism of the monument (Asher, 1992; Blair & Bloom, 1994; Koch, 2005; Koch, 2006; Moynihan, 1979; Tillotson, 2008).

HSR (LONDON),
HOUGHTON STREET REVIEW JOURNAL
ISSN: 2058-5519|Impact factor-15.9
http://houghtonstreetreview.com/index.php/hsr

3. **Official documents.** These include the UNESCO World Heritage listing, information from the Archaeological Survey of India, and the 1996 Supreme Court of India decision on pollution around the monument (M.C. Mehta v. Union of India, 1997).

Analysis

The sources were read and grouped under three themes: origin and construction, design and symbolism, and modern preservation. Where sources disagreed, the more cautious claim was used, and the disagreement is noted in the text. Seventeenth-century writers sometimes gave very large numbers or told stories that cannot be checked, so such details are presented as traditional estimates rather than proven facts.

Results

Origin and construction

Mumtaz Mahal, born Arjumand Banu Begum, died on 17 June 1631 in Burhanpur, in the Deccan, while accompanying Shah Jahan on a military campaign (Koch, 2006). Her body was first buried there and later moved to Agra. Work on the mausoleum began around 1632. The main tomb building was largely finished by about 1643, and the full complex, including the outer courtyards and gateway, was completed around 1653 (Koch, 2006).

The project was not the work of a single genius. Koch (2006) explains that a team of designers, calligraphers, masons, and inlay specialists worked under imperial supervision. Ustad Ahmad Lahori is often named as the leading architect, but the exact division of roles remains uncertain. Tavernier (1925) wrote that around 20,000 workers were employed for about 22 years. Modern historians treat this number as a traditional estimate, but it correctly suggests a very large organized workforce.

The white marble came from the quarries of Makrana in Rajasthan. Decorative stones were brought from different regions and used in the inlay technique known as *pietra dura*, in which small pieces of colored stone are set into marble to form flowers and vines (Koch, 2006).

After 1658, Shah Jahan was removed from power by his son Aurangzeb and kept in Agra Fort, where he died in 1666. He was buried beside Mumtaz Mahal inside the Taj Mahal (Asher, 1992).

Design and symbolism

The monument is based on a strict plan. The main tomb stands on a raised platform at the northern end of a large *charbagh*, a garden divided into four parts by water channels. This layout comes from Persian and Central Asian garden traditions and was linked in Islamic thought to the idea of paradise (Moynihan, 1979). The tomb is crowned by a large double dome, with a total height of about 73 meters, and four slim minarets, each around 40 meters high, stand at the corners of the platform.

http://houghtonstreetreview.com/index.php/hsr

The design is almost perfectly symmetrical. On either side of the tomb stand two red sandstone buildings: a mosque to the west and a building of matching shape to the east. Their color creates a clear contrast with the white marble.

Inscriptions also have an important role. Verses from the Quran, written in elegant script, decorate the gateway and the tomb. Koch (2005) argues that the choice of verses, many of them about judgment and paradise, supports a reading of the whole complex as an image of the Garden of Paradise on the Day of Judgment. In this reading, the Taj Mahal is both a tomb and a religious statement about the emperor's hope for divine mercy, and it also presents Shah Jahan as a just ruler.

The architecture shows a mixture of traditions. Persian domes and gardens, Timurid tomb design, and Indian craftsmanship and decorative details all appear together (Blair & Bloom, 1994). The result is not a copy of any one earlier building but a new and very refined synthesis.

Global recognition and cultural meaning

European travellers wrote about the monument in the seventeenth century, and later visitors helped to create its image as the world's most famous love monument (Begley & Desai, 1989). UNESCO listed it in 1983 under criterion (i), which recognizes works of outstanding creative achievement. The Archaeological Survey of India manages the site, and in the years before 2020 it received roughly 6 to 7 million visitors annually, according to figures reported by the ASI.

One popular story claims that Shah Jahan planned a second, black marble tomb for himself across the river. Koch (2006) finds no solid evidence for this, and it is usually considered a legend that grew from a misunderstanding of earlier accounts. This example shows how romantic stories sometimes grow around the monument faster than historical proof.

Preservation challenges

The most serious modern threat is air pollution. Industry, traffic, and the burning of coal and other fuels in and around Agra have caused the marble to become yellowish and dull in places. In 1996, the Supreme Court of India ordered industries within the so-called Taj Trapezium Zone, an area of about 10,400 square kilometers, to switch to cleaner fuel or move away. The decision remains a landmark in Indian environmental law, and it shows that the monument is protected not only by heritage rules but also by public interest.

Tourism creates a second pressure. Large crowds increase physical wear, humidity inside the tomb chamber, and the need for careful visitor management (Tillotson, 2008). The condition of the Yamuna River, which once formed part of the monument's setting, is a third concern.

Discussion

The results confirm that the Taj Mahal is much more than a romantic tomb. The evidence suggests that love and imperial ideology were not opposites in this project. For Shah Jahan, a monument to his wife could also express his own power, his piety, and his taste. Koch's (2005) reading of the Quranic

inscriptions is especially useful here because it connects the emotional story with a religious and political one.

The monument's lasting appeal can be explained by the combination of three factors. The first is its design: symmetry, proportion, and the contrast of materials create an effect of calm and balance. The second is its story, which is easy to understand and emotionally strong. The third is its cultural position, since it belongs to Indian, Islamic, and world heritage at the same time. This combination explains why people from many countries feel a personal connection to it.

There are limits to this study. It relies on translated and published sources, so it cannot offer new archaeological evidence. Some seventeenth-century claims, including the number of workers and certain details about Shah Jahan's plans, cannot be fully verified. Future research could use Persian-language archives directly, include recent scientific studies of marble condition, and measure how visitor numbers affect the building.

From a conservation point of view, the case of the Taj Mahal teaches a practical lesson. Protecting a monument does not mean only repairing stone. It also means controlling the air, water, and traffic of the surrounding region, and the Supreme Court decision of 1996 is an early example of this wider approach.

Conclusion

The Taj Mahal is a timeless symbol of love, but history shows that it is also a carefully planned expression of Mughal religion, politics, and art. Its garden, its calligraphy, and its marble inlay all contribute to a unified vision of paradise. Its fame today depends on both its beauty and its story. At the same time, pollution and mass tourism put its future at risk. Careful management, based on reliable evidence rather than legend, is necessary so that future generations can see the monument as it was meant to be seen.
