ANNOTATION

In this article, the role and requirements for the use of interactive methods, innovative technologies, pedagogical and information technologies in the educational process are discussed, and the role of modern interactive methods in the development of creative thinking of students is discussed.

Keywords: creative thinking, humanistic communication, active interaction, interactive method, educational goal, independent thought, science, technology, technology.

THEORETICAL AND METHODOLOGICAL BASES OF IMPROVING STUDENTS INNONATIVE THINKING SKILLS

ABSTRACT

In this state the role of modern interactive methods in the development of creative thinking, increasing the requirements for the use of interactive methods, innovative technologies, pedagogical and informational technologies in the educational process.

Reference expression: creative thinking, communication, interactive methods, independent thinking, teaching and educational purpose, the science, technique, technology.

INTRODUCTION

In our republic, in accordance with international requirements, special attention is paid to increasing the innovative activity of students of higher educational institutions, expanding the opportunities for developing innovative thinking skills based on advanced foreign experiences, and developing pedagogical mechanisms for the effective use of information and communication and digital technologies. President of the Republic of Uzbekistan Sh.M. Mirziyoyev, emphasizing the need to further improve our country's education system, develop work in the field of introducing new, modern methods of education, including pedagogical and information and communication technologies, says: "We all know well that today is an era of high technologies, innovations..." [1].

In the development of world education, the importance of developing innovative thinking skills in determining the country's prosperity, socio-economic, national and cultural progress, as well as its prospects and future is incomparable. Today, the UN World Declaration on Higher Education in the 21st Century, UNESCO's educational programs, and the Balayan Declaration, adopted in order to create a unified higher education system in Europe, play an important role in improving the quality of higher education. The 1998 UN (UNESCO) perspective report on education, science and culture entitled "UNESCO: Horizons 2020" paid special attention to the image of the higher education system, the culture and policy of teacher training, and especially to the new strategy of preparing students for innovative activities based on the development of new thinking skills. This directly creates the basis for improving the quality and competitiveness of personnel training.

Currently, the problems of preparing students of higher educational institutions for innovative activities, more fully demonstrating their innovative thinking skills, individual creative activity, increasing their intellectual potential, and directing the knowledge, skills and competencies acquired during their studies to solving innovative problems occupy a special place all over the world. Successfully solving these problems requires improving the higher education system, clarifying its goals and objectives, and an integrated approach to improving the content of students' innovative thinking skills in accordance with the new requirements of the innovation system of higher educational institutions. In our republic, special attention is paid to increasing the innovative activity of students of higher educational institutions in accordance with international requirements, expanding the opportunities for developing innovative thinking skills based on advanced foreign experiences, and developing pedagogical mechanisms for the effective use of information and communication and digital technologies. The President of the Republic of Uzbekistan, Sh.M. Mirziyoyev, emphasizing the further improvement of the education system of our country, the development of work in the field of introducing new, modern methods of education, including pedagogical and information and communication technologies, says: “We all know well that today is an era of high technologies, innovations..."[1].

As a result, based on advanced experiences, students' innovative thinking skills will be developed, the education system will be further improved based on world standards, and the quality of personnel will quickly adapt to the competitive environment. Resolution of the President of the Republic of Uzbekistan dated April 20, 2017 No. 2909 “On measures for the further development of the higher education system”, dated July 27, 2017 No. PQ- 3151 “On measures to further expand the participation of economic sectors and sectors in improving the quality of training of specialists with higher education”, dated November 1, 2017
